

Peel Crag Restoration Festival notes

Bit of background to whole idea

The crag is an extensive north-facing Whin Sill Dolerite escarpment (part of the same sill that forms Crag Lough – the focus of previous clean-up festivals) offering nearly 100 recorded routes the majority of which are in the perennially popular HS to HVS range. Although north facing the rock is generally clean, extremely hard wearing and does not tend to polish. The crag was one of the earliest to be developed in Northumberland and the classics at this fine crag bear comparison with the best outcrop routes anywhere. However, over the last few years the crag has fallen out of fashion, with many climbers tending to focus on sandstone outcrops further north in The County. The relative neglect of the Whin Sill crags has resulted in increased vegetation on all but the most popular routes resulting in the familiar cycle of less attention and further encroachment of vegetation. This effect is particularly noticeable at the far end of the crag to the west of the classic Tiger's Overhang.

The efforts of the last three years at Crag Lough have brought many routes back into condition and the crag is once again being enjoyed to full. This year, due to popular demand, the focus is shifting to Peel Crag.

The vegetation of concern tends to be grass and small shrubs encroaching on ledges and in cracks; unlike on sandstone, lichen formation in the winter months is not a significant problem. The timing of the clean-up towards the end of the season is to allow for the departure of any nesting birds. The winter months will help to clean away any debris and vegetation will not return during this time. As has been found this summer the benefits should be enjoyed throughout next year and beyond

The Plan

The plan is to clean routes on the Saturday and enjoy the fruits of our labour by climbing on the Sunday. The BMC is laying on a barbecue at Winshields Farm Campsite on the Saturday evening as thanks for your efforts. There is a good pub (Twice Brewed Inn) a very short walk away.

Accommodation

The Winshields Farm Campsite is 400 yards west of the [Twice Brewed Inn](http://www.twicebrewedinn.co.uk) on the Military Road (B6318) - www.winshields.co.uk.

Cost is £8 per person for camping, 50 pence per car; there are ca 60 pitches, so space is not an issue and booking probably not needed. They even do breakfasts on site! If you don't feel like camping there is also a bunkhouse which sleeps 12. I would suggest advance booking if you plan to use the bunk house. There is also a [YHA hostel](http://www.yha.co.uk) near the pub.

The Crag

The crag is situated 35 miles west of Newcastle upon Tyne about half a mile off the Military Road (B6318). See [UKClimbing logbook](http://www.ukclimbing.com) listing. Cars can be parked at the National Trust Steel Rigg car park; the crag is a five-minute walk from the parking.

The crag sits immediately below the Roman Wall (UNESCO World Heritage Site) on land owned by the National Trust, who are fully supportive of the clean-up. The crag is also an SSSI. The scientific interest is in the geological formation itself rather than any flora or fauna living upon it, consequently removal of vegetation has a positive impact on this aspect of the crag environment. Formal approval has been given from English Nature.

On the day

We will be meeting at the Steel Rigg car park (grid reference NY751677) at 9:30am. There will be a short briefing from the BMC and/or myself at around 9:45am. A short risk assessment will be provided which you will all be asked to read and sign. The assessment is really a matter of common sense. We will then head off en masse to the Crag at 10:00am.

The barbecue will get going around 6 - 7pm.

Litter is not a significant issue at the crag; the purpose of the clean-up is to remove vegetation from holds, ledges and cracks. The problematic vegetation is most commonly sods of turf which can be removed on abseil safeguarded by a prussik. If you are fairly new to climbing and have any doubts what so ever about setting up abseil anchors and abseiling safely please don't be afraid to ask; there will be plenty of experienced folk to pair up with if needs be.

What to bring

Standard climbing gear: rope

basic rack for setting up anchors (including long slings)

prussik loops

helmet

Gardening kit:

gardening gloves

small trowel (for ledges/flat holds)

a patio knife (for narrow cracks / a nut key will work nearly as well)

small nylon bristle brush (for cleaning away dirt and soil).

A small pruning saw might be found useful

Anything which you bring for gardening and cleaning on abseil should have an attachment loop of some kind so it can be clipped to your harness with a krab. Don't worry if you don't have everything on the list above. We will have goggles, gardening gloves, trowels, patio knives and brushes for you to borrow on the day.

If you have read this far, thanks! I don't think there is anything else, but if you have any questions please get in touch – mark_anstiss@hotmail.com

Hope to see you on the 5th September.

Mark Anstiss
